#### 1. Introduction

#### 1.1. About B.Voc

Realizing the importance and the necessity for developing skills among students, and creating work ready manpower on large scale especially to meet the demand-supply mismatch in the Indian Economy, the University Grants Commission (UGC), Ministry of HRD, Government of India had launched a scheme on 27 February 2014 for skills development based higher education as part of college/university education, leading to Bachelor of Vocation (B.Voc). In these courses, the institute will conduct general education content and sector-specific skills will be imparted by Skill Knowledge Providers/ Training Providers/ Industries.

#### 1.2. Auroville B.Voc Program

We are not here to do (only a little better) what the others do.

We are here to do what others cannot do because they do not have the idea that it can be done.

We are here to open the way of the Future to children who belong to the Future.

Anything else is not worth the trouble and not worthy of Sri Aurobindo's help

— The Mother, 6 September 1961.

While looking at the incredible advancement of science, the world continues to face an enormous crisis, especially the rural-urban divide and the disconnection of technological progress with human needs. *Auroville* is the city of the future and we are here to open the way of the future for youth who belong to the future. Our program and curriculum based on integral education address not only the **skills** needed by the youth but also the **competencies** to use these skills to create a life-enhancing culture and interrupt unhealthy social narratives (or ISMs such as casteism, sexism, consumerism, etc.) and **develop inner capacity** (responsibility, dignity, courage to create) already present in the youth. The B.Voc programs over the three years are targeted for these. The program has been developed by academia, recent neuroscience and leadership training, and industry leaders through research and application and includes recent online learning platforms.

In doing so we develop the five minds of the future as described by Daniel Goleman. Unlike most programs that only focus on the disciplined mind (learning a specific discipline) through this program we aim to develop the synthesizing mind (ability to abstract, compare, and summarize), the respectful mind (respect and dignity for all), the ethical mind (developing systems and culture with care for people and planet), and the creative mind (creativity that comes from care as distinguished from innovation which may be limited to something new).

The methodology of all the courses will be to connect learning with application to make abstract learning concrete. Further, most courses as far as possible, courses will be based on constructivism and constructionism, i.e. in mini-projects that make something tangible. Even courses

that are generally considered theoretical like Mathematics will be tied into applying it through visualization or programming. In line with this approach, the assessments will be based on applying what the students care about to creating in the first year small projects and in the following years larger projects for humanity. To encourage entrepreneurship, the youth will also be required to make it into a prototype and give a presentation about the idea and create a flyer/three-fold brochure about their product and a report indicating the technical learning, problems solved and costs of the prototype. Viva will also be conducted with these submissions to ensure that the students understand the concepts and have the confidence to present themselves.

#### 2. Key Features:

#### **Objectives**

To ensure integral development of skills, competencies, and inner capacities. Specifically, skills related to their program, competencies to use skills to create empowering cultures at home and work, and to know their inner capacity of the values they stand for in life.

To ensure that the students are adequately developed at each exit point of the program.

To provide flexibility to the students by means of pre-defined entry and multiple exit points.

To address the National Skills Qualifications Framework (NSQF) within the undergraduate level of higher education by developing the five minds of the future to enhance the impact of the students when they are engaged in an industry or when they create their own enterprise.

Providing vertical mobility to students admitted in such vocational courses through certification levels will lead to Diploma/Advanced Diploma/B. Voc. A degree in Software development and machine learning will be offered by Pondicherry University.

Students may be awarded Level Certificate/Diploma/Advanced Diploma /Degree as outlined in the Table:

Award	Course	Duration after class XII or equivalent	Corresponding NSQF level
Level 4 Certificate	Certificate	06 Months (30 Credits)	4
Level 5 Certificate	Diploma	1 Year (60 Credits)	5
Level 6 Certificate	Advance Diploma	2 Year (120 Credits)	6
Level 7 Certificate	B.Voc Degree	3 Year (180 Credits)	7

#### 3. Course Objectives

The course aims to develop the integral personality of an individual as needed at the highest level of NSQF in stages. After completing the vocational course, the student would not only have acquired relevant appropriate, and adequate technical knowledge to work in high-end jobs like software development and machine learning, but also have competencies not just to take up gainful employment, but to create a healthy environment in the workplace and some will even be able to start their enterprise.

#### A. Understanding of

- (a) The relevant concepts and principles in essential science and Mathematics. So that he/she can understand the different vocational subjects.
- (b) The concepts and principles of different programming languages
- (c) The concepts of object-oriented programming language, graphical user interface, operating system, machine learning, and data processing visualization
- (d) Understanding of the software development life cycle process

#### B. Adequate Professional Skills and Competencies in

- 1) Apply the knowledge of programming, mathematics, machine learning for complex problem-solving.
- 2) Design the solution for complex engineering problems and design the system components or processes that meet the specific needs with appropriate consideration for public health and safety and cultural societal, and environmental considerations in alignment with personal and organizational values.
- 3) Create, select, and apply appropriate modern IT tools including prediction.
- 4) Apply ethical principles and commit responsibility to the engineering practice.

#### C. A Healthy and Professional Attitude so that He/ She has

- 5) An analytical approach while working on a job.
- 6) An open mind learning new IT tools/ programming language
- 7) Respect for working with his/her own hands.
- 8) Respect for honesty, punctuality, and truthfulness

# D. NSQF compliant skills in Qualification developed by sector skill council in Capital Goods Sector.

#### 4. Course Structure

The course will consist of a combination of theory, practice, hands-on skills, and integral development of the personality. The curriculum of the past where there are separate theories and practical's is replaced by immediate application to build a disciplined mind. Each item needs to be understood, practiced and remembered for this. Further, there is a need to synthesize so that the learning can be increased and does not get lost as the students continue to grow their skills and knowledge. In addition, the development of leadership and agency in students will help the program be effective.

#### **Skill Development Components:**

The focus of skill development components shall be to equip students with appropriate knowledge, practice, and attitude, to become work-ready. The skill development components will be relevant to the industry as per its requirements.

The overall design of the skill development component along with the job roles selected will be such that it leads to a comprehensive specialization in a few domains.

The curriculum will focus on work-readiness skills in each of the years of training.

Adequate attention will be given in curriculum design to practical work, on-the-job training, development of student portfolios, and project work.

#### **General Education Component:**

The general education component adheres to the normal senior secondary and university standards. It will emphasize and offer courses that provide holistic development. However, it will not exceed 40% of the total curriculum.

Adequate emphasis is given to language and communication skills.

The curriculum should be designed in a manner that at the end of year-1, year-2 and year-3, students can meet the below-mentioned level descriptors for level 5, 6 and 7 of NSQF, respectively which are as given below:

Level	Process required	Professional Knowledge	Professional skill	Core skill	Responsibility
Level 5	Job that requires well developed skill, with clear choice of procedures in familiar context	Knowledge of facts, principles, processes and general concepts, in a field of work or study	A range of cognitive and practical skills required to accomplish tasks and solve problems by selecting and applying basic methods, tools materials and information	Desired mathematical skill, understanding of social, political and some skill of collecting and organizing information, communication.	Responsibility for own work and learning and some responsibility for other's works and learning
Level 6	Demands wide range of specialized technical skill, clarity of knowledge and practice in broad range of activity involving standard/non-standard practices	Factual and theoretical knowledge in broad contexts within a field of work or study	A range of cognitive and practical skills required to generate solutions to specific problems in a field of work or study	Reasonably good in mathematical calculation, understanding of social, political and reasonably good in data collecting organizing information, and logical communication	Responsibility for own work and learning and full responsibility for other's works and learning
Level 7	Requires a command of wide ranging specialized theoretical and practical skill, involving variable routine and nonroutine context	Wide ranging, factual and theoretical knowledge in broad contexts within a field of work or study	Wide range of cognitive and practical skills required to generate solutions to specific problems in a field of work or study	Good logical and mathematical skill understanding of social political and natural environment good in collecting and organizing information, communication and presentation skill	Full responsibility for output of group and development

#### **Eligibility for Admission:**

Candidates for admission to B.Voc (Software Development & Machine Learning) shall be required to have passed 10+2 or 10+ITI (2 years) or its equivalent from a recognized board of examination.

#### Medium:

The medium of instruction shall primarily be English.

#### **ELIGIBILITY FOR APPEARING FOR SEMESTER EXAMINATION:**

Although having 100% overall attendance in all of the courses throughout a semester is desirable, a student must have at least 75% overall attendance in order to be eligible to take the exam. A student who has an overall attendance rate of less than 75% but a semester attendance rate of 60% or above may only be authorised to present for the semester examination on medical grounds after submitting the required condonation fee and a medical certificate issued by a medical officer.

If a student's overall attendance for a semester is less than 60%, they are not allowed to take the semester exam and therefore cannot continue to the next semester. Those students have to enroll in the course again the following academic year in the same semester.

#### 5. Assessment

#### a. Theory Courses

All theory courses shall be assessed as follows:

Assessment Method	Marks
Continuous Assessment (Internal)	40
Semester Examination (External)	60
Total	100

#### Continuous Assessment (Internal)

Continuous Assessment (Internal)	Marks
Attendance	05
Internal Assessment Test	25
Assignments	10
Total	40

Attendance carries 5 marks (5 marks for 100% to 95% attendance, 4 marks for 94% to 90% attendance, 3 marks for 89% to 85% attendance, 2 marks for 84% to 80% attendance and 1 mark for 79% to 75% attendance), cycle test carries 25 marks. Performance in the best two of the three tests will be taken for assessment. Assignments carrying 10 marks, shall be in the form of problems, small projects, quizzes, design problems, etc., depending upon the subject content.

#### Semester Examination

The pattern of Semester Examination question papers for theory courses is as follows:

- a) The duration of the examination shall be 3 hours with a maximum of 60 marks.
- b) Section A contains 5 compulsory questions each carrying 2 marks. Only one question shall be selected from each unit. This section carries 10 marks in total.
- c) Section B contains five questions, one question from each unit with 'either' 'or' choice. Each question carries ten marks. Based on necessity, each question may contain sub-divisions. This section carries 50 marks in total.

#### **b.** Practical Courses:

All practical courses shall be assessed as follows:

Assessment Method	Marks	
Continuous Assessment	40	
Semester Examination	60	
Total	100	

#### Continuous Assessment (Internal)

Continuous Assessment (Internal)	Marks
Attendance	05
Model examination	15
Regular Laboratory Work	20
Total	40

Attendance carries 5 marks (5 marks for 100% to 95% attendance, 4 marks for 94% to 90% attendance, 3 marks 89% to 85% attendance, 2 marks for 84% to 80% attendance and 1 mark for 79% to 75% attendance). The regular performance in the practical class (Observation and Record) will be evaluated for 20 marks. Performance in the Model examination conducted at the end of the semester will be evaluated for 15 marks. The pattern of the Model Examination will be similar to the Semester Examination.

#### Semester Examination

The Semester Examination of the practical courses will be evaluated for 60 marks by a panel of examiners comprising an internal examiner and an external examiner. The Break-up of marks is as follows:

Algorithm : 10 marks
Practical work and calculations : 40 marks

Viva-Voce : 10 marks

#### c. Project Work

The Project work carried out in the seventh and eighth semesters- shall be assessed as follows:

Assessment Method	Marks
Continuous Assessment (Internal Evaluation)	60
Semester Examination (External Evaluation)	40
Total	100

ii) Marks allocated for Continuous Assessment are distributed as given in the following table.

Assessment Method	Marks
Guide	25
Project Evaluation Committee	35
Total	60

- a) The guide shall evaluate the student for 25 marks based on the work carried out.
- b) The Project Evaluation Committee comprising the Head of the Department and two other faculty members shall evaluate the project for 35 marks. The evaluation will be carried out through three reviews. The Project Evaluation Committee is constituted by the Head of the Department.
- iii) The final *Semester Examination* of the Project Work will be conducted by a panel of examiners comprising an internal examiner and an external examiner. The Break-up of marks is as follows:

Project report : 15 marks
Presentation : 15 marks
Viva-Voce : 10 marks

#### d. Theory Cum Practice Courses

All theory cum practice courses shall be assessed as follows:

Assessment Method	Marks
Continuous Assessment (Internal)	40
Semester Examination (External)	60
Total	100

#### Continuous Assessment (Internal)

Continuous Assessment (Internal)	Marks
Attendance	05
Internal Assessment (Cycle Test + Model Exam)	20
Regular Laboratory work	15
Total	40

Attendance carries 5 marks (5 marks for 100% to 95% attendance, 4 marks for 94% to 90% attendance, 3 marks for 89% to 85% attendance, 2 marks for 84% to 80% attendance, and 1 mark for 79% to 75% attendance), Internal Assessment test comprises of cycle test carries 10 marks (Performance in the best two of the three tests will be taken for assessment) and the model examination conducted at the end of the semester which carries 10 Marks, and regular performance in the practical class (Observation and Record) will be evaluated 15 marks.

#### Semester Examination

The *Semester Examination* will be conducted as Semester Examination theory and semester Examination Practical each carrying 30 Marks.

The pattern of Semester Examination question papers for theory courses is as follows:

- a) The duration of the examination shall be 2 hours with a maximum of 30 marks.
- b) Section A contains five questions, one question from each unit with 'either' 'or' choice. Each question carries six marks. Based on necessity, each question may contain sub-divisions.

The Semester Examination of the practical courses will be evaluated for 30 marks by a panel of examiners comprising an internal examiner and an external examiner. The Break-up of marks is as follows:

Procedure : 10 marks

Practical work and calculations : 15 marks

Viva-Voce :05 marks

#### e. On-Job Training

Depending on the job role (Qualification Packs) that the students have chosen in the industries, the assessment for on-the-job training will be carried out in accordance with the relevant Skill Sector Council.

#### f. Declaration of Results

#### **Examination Passing Criteria:**

- i. A student is declared to have *passed* a course if he gets 40% marks and above in the Semester Examination and 50% marks and above overall (Semester Exam marks and Continuous Assessment marks put together).
- ii. If a student fails to clear the semester examination of a theory course after three consecutive attempts, the passing criteria from the fourth attempt onwards will be based on the marks earned by the student in the end-semester examination only. The student is deemed to have passed the course if the mark scored in the end semester examination is 50% and above and he will be awarded only a **C** grade irrespective of the mark scored.

#### g. Award of grades

The performance of students in a course is expressed in terms of Letter Grades, each carrying certain Grade Points. A total of Six passing Grades namely O, A+, A, B+, B, and C is awarded. Total marks (sum of Continuous Assessment and Semester Examination marks) secured by a student in a course are used for computing his Grade by fitting the mark into the Range of Marks assigned for each Grade shown in the table below.

Range of Marks	Letter Grade	Grade Points
91 to 100	О	10
81 to 90	A+	9
71 to 80	A	8
61 to 70	B+	7
56 to 60	В	6
50 to 55	С	5
0 to 49	F	0
Absent	FA	0

- b. A student who has secured an 'F' and 'FA' grade shall reappear for the examination in the following semesters. A student who has scored a passing grade other than an "F" and "FA" cannot reappear for the examination.
- c. A student securing an 'F' grade in an elective course may reappear for the examination in the following semester or drop the elective course and subsequently register for another elective course in the following semester in place of the dropped elective course.
- d. *Grade Point Average* (GPA) indicates the performance of a student in all the examinations appeared him in a particular semester. GPA score will appear in all the Semester Examination Grade Cards. The *Grade Point Average* (GPA) for a particular semester is calculated as the ratio of the sum of the products of the number of Credits of a course  $(C_i)$  and the Grade Points scored in that course  $(GP_i)$ , taken for all the courses, to the sum of the number of credits of all the courses (n) registered in that semester.

$$GPA = \frac{\sum_{i=1}^{n} C_{i} GP_{i}}{\sum_{i=1}^{n} C_{i}}$$

where n is the number of courses registered in that semester. For a student who has partially withdrawn from writing examinations of courses in a semester, n is counted as the total number of courses that appeared in that semester minus the number of courses partially withdrawn.

e. Cumulative Grade Point Average (CGPA) indicates the performance of a student in all the examinations appeared by him up to a particular semester. CGPA score will appear in all the

Semester Examination Grade Cards starting from the first semester. The *Cumulative Grade Point Average* (CGPA) up to a particular semester is calculated as follows:

$$CGPA = \frac{\sum_{i=1}^{n} C_{i}GP_{i}}{\sum_{i=1}^{n} C_{i}}$$

where  $C_i$  is the Credit of a course,  $GP_i$  is the Grade Point obtained by the student in that course and n is the total number of courses registered up to that semester starting from the first-semester

# **CURRICULUM**

Below Table shows cumulative credits awarded to the learners in skill-based vocational courses.

NSQF Level	Skill Component Credits	General Education Credits	Total Credits for Award	Normal Duration	Exit Points/ Awards
4	18	12	30	One Semester	Certificate
5	36	24	60	Two Semesters	Diploma
6	72	48	120	Four Semesters	Advanced Diploma
7	108	72	180	Six Semesters	B.Voc Degree

COURSE O	UTCOMES:
Upon compl	etion of this course, students will be able to:
CO1:	Learn principles of basic programming and interactive programming with a visual programming language like Scratch 3 (MIT)
CO2:	Know various programming languages and choice of Python as a first programming language.
CO3:	Understand variables, data types, and expressions.
CO4:	Learn about conditional coding and loops and modular programming with functions.
CO5:	Learn about OOPS in Python.
REFERENC	E COURSES:

		L	Т	Р	Credits
	Applied Mathematics	3	0	0	3

#### PREREQUISITES:

Basic Concepts of numbers system, Vector Calculus

#### **COURSE OBJECTIVES:**

1	To learn to revisit mathematical concepts visually.
2	To learn to interpret integration and differentiation through their application.
3	To learn matrices and their application.
4	To learn vector algebra and calculus.

UNIT	TITLE	PERIODS
1	Mathematical concept through IKS (Indian Knowledge Systems)	10

Bhramagupta's rules of integers. Rajju Ganit (Rope Mathematics) - revisiting circles, measuring perimeter, measuring angles in radians, dividing a circle into any number of parts desired, trigonometry using circles. Visual proofs of "Pythagoras theorem". Pythagoras' theorem and application in - coordinate geometry, equation of circles, and complex numbers.

UNIT	TITLE	PERIODS
2	Visual Algebra	11

Plotting algebraic expressions, Geogebra (the relation between algebra and geometry), functions - linear, quadratic, cubic functions, exponential, logarithmic. Zeros of an equation (factorization in algebra) as understood and solved visually. Linear algebra and solution of simultaneous equations in 2 D.

UNIT	TITLE	PERIODS
3	Visual Calculus	11

Differentiation as slope at a point and integration as areas of curves. Application to constant acceleration to get velocity and distance through integration. Integration in continuous time (electronics)/discrete-time (computer science), Integration calculation in computers as FEM.

Differentiation application to find the location of peaks and troughs in curves and second differentiation to find if they are peaks or troughs. Differentiation of polynomial, exponential, and logarithmic expressions.

UNIT	TITLE	PERIODS
4	Vector algebra and vector calculus	11

Vector algebra: scalar and vector products; scalar and vector triple products; geometric applications. Vectors as viewed by mathematicians, physicists, and computer scientists. Differentiation of a vector function; scalar and vector fields. Gradient, divergence, and curl - definitions and physical interpretations; product formulae; curvilinear coordinates. Gauss' and Stokes' theorems and evaluation of integrals over lines, surfaces, and volumes.

UNIT	TITLE	PERIODS			
5	Graph Theory	11			
	Graph Theory - Representation of graphs, Breadth-first search, Depth-first search, Applications of BFS and DFS; Directed Acyclic Graphs - Complexity of BFS and DFS, Topological sorting.				
	TOTAL PERIODS:	54			
COURSE O	UTCOMES:				
Upon comple	etion of this course, students will be able to:				
CO1:	Demonstrate mathematical concepts visually.				
CO2:	Interpret integration and differentiation visually and through their applicatio	n.			
CO3:	Understand vector algebra and calculus

	Programming and Web Designing Lab	0	0	8	4	
PREREQUI	PREREQUISITES:					
Fundamentals of Web Design						
COURSE C	BJECTIVES:					
1	To learn principles of basic programming and interactive programming with a visual programming language like Scratch 3 (MIT).					
2	To learn principles of basic programming with F	ython				
3	To learn key principles of interactive programming and creating games and problem-solving tasks					
4	To learn the various ways to run the program on Windows, and Linux. Suggested editors and integrated development environment					
5	To learn to work with various data types including string, list, tuples, dictionaries,  Boolean and more. How to use variables based on the requirement					
	TITLE				PERIODS	
LABORAT	LABORATORY 144				144	

#### Scratch

- 1. Sprites, stage, blocks, saving and loading projects, using mouse. Sprite options. Costume, sound, background options code, backdrop, sounds. Basic events, control Challenge
- 2. Advanced Events, control, sensing of different types, basic operators Challenge: Interactive Q & A game, Make a maze game
- 3. Blocks help avoid repeat code and take parameters, variables help generalize code and add memory functionality, use of random number generator Challenge: Add scores to earlier programs, reduce lines of code with blocks, generalize Q & A e.g. cube root of a number questions generated on their own.
- 4. Advanced operators and lists to remember the sequence of data and its processing Challenge: Enter a list of 10 names and the program tests you to tell them backwards. Given an angle, the program calculates the cosine of the angle in degrees/radians.

#### **Python**

- 5. Using online interpreters for learning python3 printing a string
- 6. Guess the number game with feedback of higher and lower (for loop, if conditions)
- 7. Implementing rock, paper, lizard, scissor, spock (with functions)
- 8. Creating a complex number class and creating methods to return the real, complex, magnitude, argument and inverse of a complex number.
- 9. Creating functions that takes two complex number and returns a complex number that returns their sum, difference, and product
- 10. Operator overload so '+', '-', '\*' operators work for complex number class

#### Web Design

- 11. Create an HTML document giving details of your [Name, Age], [Address, Phone], and [Register Number, Class] aligned in the proper order using alignment attributes of the Paragraph tag.
- 12. Write HTML code to design a page containing some text in a paragraph by giving a suitable heading style.
- 13. Create a web page using embedded CSS and multimedia Procedure
- 14. Coming up with a problem Problem statement and requirement analysis for the specific problem statement. Create personas at least 3 and draw task procedures for a complete solution
- 15. Design the Screen flow for problem statement

TOTAL PERIODS:	144
COURSE OUTCOMES:	
Upon completion of this course, students will be able to:	

CO1:	Learn principles of basic programming and interactive programming with a visual programming language like Scratch 3 (MIT).
CO2:	Become comfortable doing small projects from scratch 3.
CO3:	Skill to develop applications with real-time application
CO4:	Ability to work in programming skills in python
CO5:	The fundamentals of how to store, retrieve, and process data efficiently.

4	To understand system calls and memory management					
THEORY	•					
UNIT	TITLE				PERIODS	

Computer system overview, concept of an operating system, batch system, multiprogramming, multiprocessing, multi user, time sharing, personal system, parallel system, real time system, simple monitors, general system architecture, System components, operating system services, system calls, system programs, system structure, Approaches to OS design and implementation: Microkernel, Layered, Kernel Approach

**Concepts of Operating Systems** 

UNIT	TITLE	PERIODS
2	Processes and Threads	12

Concept of process, process states, process state transitions, process control block, operations on processes, threads, concurrent processes, mutual exclusion and synchronization, principles of deadlocks, integrated deadlocks strategy, scheduling levels, scheduling criteria, Inter process synchronization, Inter process communication, Linux, IPC Mechanism, Remote procedure calls, RPC exception handling, security issues.

UNIT	TITLE	PERIODS
3	Memory Management and Data Management	12

Logical and physical address space, storage allocation and management techniques, swapping concepts of multi programming, paging, segmentation, virtual storage management strategies, demand paging, page replacement algorithm, thrashing, File organization, record blocking, access method, directory structure, protection file system structure, allocation methods, free space management, directory implementation, disk structure, disk scheduling, disk management, buffering, swap space management, RAID levels

TITLE	PERIODS
LABORATORY	72

12

- 1. Ubuntu operating system installation and setup.
- 2.User account creation and setting user permissions.
- 3.static and dynamic network setting using commands.
- 4. Install,upgrade,remove software packages in Linux operating system.
- 5. File management- File listing(ls), creating file (touch, vi), Display the file content(cat), Copying the file (cp,scp), Moving file and Rename the file(mv), Delete the file(rm).
- 6. Disk Utilities(Fdisk,sfdisk,cfdisk,parted,lsblk,blkid,hwinfo,df,pydf).
- 7. Write a shell script to list all of the directory files in a directory.
- 8. Write a Shell Script that accepts a filename, starting and ending line numbers as arguments and displays all lines between the given line numbers.
- 9. Write a shell script that displays a list of all files in the current directory to which the user has read, write and execute permissions.
- 10. Write a shell script that deletes all lines containing the specified word in one or more files supplied as arguments to it.
- 11. Write a shell script to count no of files in the current directory with full permissions.
- 12. Write a shell script to display list of currently logged users
- 13.Implement memory management techniques like paging or segmentation.
- 14.Implement any file allocation technique (Linked, Indexed or Contiguous).
- 15.mount, umount users +, chown, chmod, getuid, setuid.
- 16.Use the following system calls of UNIX operating system: fork, wait, exec, exit, kill, getpid, brk, nice, sleep, trace, open, close, read, write, lseek, stat, sync
- 17. Use the following system calls of the UNIX operating system: signals, pipe, socket, accept, recv, connect.

	TOTAL PERIODS:	108
COURSE O	UTCOMES:	
Upon comple	etion of this course, students will be able to:	
CO1:	Installation Linux os and dual boot enable and operating system recovery	
CO2:	Understand the basics of an operating system and its major components.	
CO3:	Understand and implement shell programming.	
CO4:	Purpose of the system files and usage	
CO5:	Create and/or modify concurrent programs.

		L	Т	Р	Credits
	Essential Science (Theory and practice)	2	0	2	3

Fundamental knowledge of Physics

## **COURSE OBJECTIVES:**

- 1 To learn to explain the macro physical phenomenon using atomic model
  - 2 To learn to interpret and model physical phenomena using calculus

UNIT	TITLE	PERIODS
1	Atomic and molecular physics	18

Atomic picture of matter, atoms as building blocks. Using atoms to understand - everyday phenomena - air pressure, dynamic equilibrium, states of matter, melting and boiling point, things expand on heating, evaporation, diffusion, and sound.

UNIT	TITLE	PERIODS
2	Interpret and model physical phenomenon with calculus	18

Rates and derivatives, straight-line kinematics - the relationship between distance, speed, and acceleration. Integration to work backward from acceleration, speed, and distance. Description of the distance covered by a falling object as a function of time. Being able to draw this visually. Potential energy, kinetic energy, and conservation of energy. Address other physical phenomena with derivatives including voltage and current of a capacitor.

LABORATORY 36

- 1.Building lattice structure (tetrahedron) for Carbon,
- 2. Silicon used in semiconductors -

Air pressure experiments(macro phenomenon based on atomic structure):

- with a balloon, sheets of paper, etc
- 3. States of matter experiment: heating experiment, evaporation, and condensation -
- 4. Diffusion experiment: ink and water. Ink drop in hot and cold water,-Puncture of the balloon
- Understanding rate -- water from a tap. What is the rate of flow?
- 5. Measuring constant speed and distance and checking repeatability (use Incline slope for different speeds)
- Measuring speed of falling objects using video camera
- Potential energy: changing mass, changing distance determining impact with stress gauge
- Pendulum potential to kinetic energy and conservation of energy with stress gauge
- Conservation of energy through conservation of momentum (football and tennis ball)
- Tracing the voltage of a capacitor with constant current (simulation or setup).

	TOTAL PERIODS:	72				
COURSE OUTCOMES:						
Upon comple	Upon completion of this course, students will be able to:					
CO1:	Understand the macro physical phenomenon using atomic model					
CO2:	Interpret and model physical phenomena using calculus

# **COURSE OBJECTIVES:**

To learn efficient storage mechanisms of data for easy access.					
2	To design and implement various basic and advanced data structures.				
To introduce various techniques for the representation of the data in the real world  To develop applications using the data structure.					
				5 To improve the logical ability	

UNIT	TITLE	PERIODS
1	Time and space complexity, Data Structure	16

Introduction to Data Structures, abstract data types, Linear list – singly linked list implementation, insertion, deletion, and search operations on the linear list, circular linked list implementation, Double linked list implementation, insertion, deletion and searching operations. Applications of linked lists, Introduction to algorithm analysis

UNIT	TITLE	PERIODS
2	Stack and queue	16

Array and linked representations of the stack, stack applications -infix to postfix conversion, postfix expression evaluation, recursion implementation.

Array and linked representations. Circular Queue operations, Dequeue, applications of queues.

UNIT	TITLE	PERIODS
3	Searching and Sorting algorithm	15

Sorting- selection sort, bubble sort, insertion sort, quick sort, merge sort, shell sort, radix sort, Searching-linear and binary search methods, comparison of sorting and searching methods.

UNIT	TITLE	PERIODS
4	Tree	12

Definitions, tree representation, properties of trees, Binary tree, Binary tree representation, binary tree properties, binary tree traversals, binary tree implementation, applications of trees.

UNIT	TITLE	PERIODS
5	Graph	13

Graphs – Representation of graphs – BFS, DFS – Topological sort – Shortest path problems. String representation and manipulations – Pattern matching, Applications.

	TOTAL PERIODS:	72
COURSE C	DUTCOMES:	
Upon comp	letion of this course, students will be able to:	
CO1:	Students will be able to choose appropriate data structures as applied to sp problem definitions.	pecified
CO2:	Students will be able to handle operations like searching, insertion, deletion traversing mechanism	n, and
CO3:	Students will be able to apply concepts learned in various representation of	f graph
CO4:	Students will be able to use linear and non-linear data structures like stacks and linked lists.	s, queues,

Knowledge in Computer programming

### **COURSE OBJECTIVES:**

To comprehend the various software process models.
 To understand the types of software requirements and SRS documents.
 To know the different software design and architectural styles.
 To learn the software testing approaches and metrics used in software development.

	UNIT	TITLE	PERIODS
I	1	Introduction to Software Engineering	14

Introduction to Software Engineering: The evolving role of software, Changing Nature of Software, Software myths. A Generic view of process: Software engineering- A layered technology, a process framework, Process patterns, process assessment. Process models: The waterfall model, Incremental process models, Evolutionary process models, The Unified process, Agility and Agile Process model, Extreme Programming, Other process models of Agile Development and Tools

UNIT	TITLE	PERIODS
2	Software Requirements:	14

Software Requirements: Functional and non-functional requirements, User requirements, System requirements, Interface specification, the software requirements document.

Requirements engineering process: Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements management.

System models: Context Models, Behavioral models, Data models, Object models, structured methods. UML Diagrams.

UNIT	TITLE	PERIODS
3	Design Engineering	16

Design Engineering: Design process and Design quality, Design concepts, the design model. Creating an architectural design: Software architecture, Data design, Architectural styles and patterns, Architectural Design. Object-Oriented Design: Objects and object classes, An Object-Oriented design process, Design evolution.Performing User interface design: Golden rules, User interface analysis and design, interface analysis, interface design steps, Design evaluation.

UNIT	TITLE	PERIODS
4	Testing Strategies	14

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, BlackBox and White-Box testing, Validation testing, System testing, the art of Debugging.

Product metrics: Software Quality, Metrics for Analysis Model, Metrics for Design Model, Metrics for source code, Metrics for testing, Metrics for maintenance.

Metrics for Process and Products: Software Measurement, Metrics for software quality.

UNIT	TITLE	PERIODS
5	Risk management	14

Risk management: Reactive vs. Proactive Risk strategies, software risks, Risk identification, Risk projection, Risk refinement, RMMM, RMMM Plan.

Quality Management: Quality concepts, Software quality assurance, Software Reviews, Formal technical reviews, Statistical Software quality Assurance, The Capability Maturity Model Integration (CMMI), Software reliability, The ISO 9000 quality standards.

	TOTAL PERIODS:	72
COURSE	DUTCOMES:	
Upon comp	pletion of this course, students will be able to:	
CO1:	To compare and select a process model for a business system	
CO2:	To identify and specify the requirements for the development of an applicati	on
CO3:	To develop and maintain efficient, reliable and cost effective software solution	ons
CO4:	To critically think and evaluate assumptions and arguments of the client

	Data Structures and algorithm Lab	0	0	6	3

Fundamentals of programing

### **COURSE OBJECTIVES:**

	Demonstrates familiarity with major algorithms, and data structures and analyzes the performance of algorithms
2	Learn to choose the appropriate data structure and algorithm design.
	Identify to specify the application and determine which algorithm or data structure to use in different scenarios

TITLE	PERIODS
LABORATORY	108

- 1. Write a program to demonstrate insertion, deletion, search, and displaying of an element in an array,
- 2. Write a program to demonstrate the sorting algorithm. (using any one of these techniques: bubble, Insertion, selection)
- 3. Write a program to demonstrate operations performed on the stack.
- 4. Program to convert infix expression to postfix and infix to postfix.
- 5. Write a program to demonstrate operations on the queue.
- 6. Write a program to demonstrate operations on a single link list.
- 7. Write a program to implement Stack as Linked List.
- 8. Write a program to implement operations on a double link list.
- 9. Write a program to demonstrate creation, traversing, and searching in Binary Search Tree.
- 10. Write a program to traverse a graph using DFS with an adjacency matrix.
- 11. Write a program to traverse a graph using BFS with an adjacency matrix.

	TOTAL PERIODS:	108				
COURSE O	COURSE OUTCOMES:					
Upon compl	etion of this course, students will be able to:					
CO1:	Implement various basic data structures and their operations.					
CO2:	CO2: Implement various graph algorithms.					
CO3:	Implement various sorting and searching algorithms.					
REFERENC	E BOOKS/ COURSES:

Course Code	Course Title		Periods per week		
		L	Т	Р	Credits
	Frontend programming Theory and Practice	2	0	4	4
PREREQUIS	SITES:	-			
Fundamenta	Fundamentals of computer and web design				

# COURSE OBJECTIVES:

1	To understand basic flask and database	
2	To learn responsive web pages design	
3	To learn dashboard design and backend connectivity	
UNIT	TITLE	PERIODS
1	Database	18

SQL database, NoSQL Database, SQL or No SQL, Database management with Flask, Relationship, Database operation, Database use in View function

UNIT	TITLE	PERIODS
2	Database framework example python+flask	18

Integration with the python shell, Database Migrations with Flask-Migrate, Creating a Migration Script, Upgrading the Database

TITLE	PERIODS
LABORATORY	72

Front end development with bootstrap:

- 1. Develop a web application to control different layouts and User Authentication, User Roles, and User profiles
- 2. Create a webpage with HTML describing your department using paragraph and list tags.
- 3. underline and two other fonts to words you find appropriate, also use header tags.
- 4. Develop a web application with background banner images and navigation menus. , Blog Posts, Followers, User comments,
- 5. Develop a web application with responsive images
- 6. Develop a web application using the left menu.
- 7. Develop settings to change the theme of the entire web Application.

Python+flask backend database:

- 8. Creating a flask database and extracting data and adding data
- 9. Create a dashboard using bootstrap and connect with the database to represent the data in the dashboard

	TOTAL PERIODS:	108				
COURSE O	COURSE OUTCOMES:					
Upon comple	etion of this course, students will be able to:					
CO1	Use basic and advanced flask					
CO2	Use data models and databases					
CO3	Use the built-in support for layout, grids, fluid grids, and responsive designs.					
CO4	Use components: Contains lots of reusable components including Icons, Dropdowns, Navbars, Breadcrumbs, Popovers, Alerts, and many more					

CO5	Use JavaScript Plug-ins: Contains lots of custom jQuery plug-ins. You can include ther all or one by one.

	Mobile Application development	1	0	4	3

Fundamentals of computer and design

# **COURSE OBJECTIVES:**

1	To facilitate students to understand android SDK	
2	To help students to gain a basic understanding of Android application deve	lopment
3	To inculcate working knowledge of Android Studio development tool	
UNIT	TITLE	PERIODS
1	Overview of Android	18

Introducing Android, The Android Application Components, The manifest file, Downloading and Installing Android, Exploring the Development Environment, Developing and Executing the first Android Application, Using Activities, Fragments, and Intents, User Interface Using Views and ViewGroups, Data Storage Options, the internal storage, the external storage, Location Services and Maps, Graphics and Animation, Audio, Video, and Camera, Publishing and Distributing Android Application.

TITLE	PERIODS
LABORATORY	72

- 1. Write an Android application for a simple arithmetic operation
- 2. Write an Android application to convert into different currencies, for example, Rupees to dollar
- 3. Write an android application to counter.
- 4. Write an android application to convert a ball from size of radius 2(color red) to radius 4(color blue) to radius 6 (color green). The ball must rotate in the circle for 1 minute before changing size and color.
- 5. Write an application to load the google maps and use the gps.

	TOTAL PERIODS:	90
Upon comple	etion of this course, students will be able to:	
CO1:	Identify various concepts of mobile programming that make it unique from for other platforms.	programming
CO2:	Critique mobile applications on their design pros and cons.	
CO3:	Utilize rapid prototyping techniques to design and develop sophisticated m interfaces	obile
CO4:	Program mobile applications for the Android operating system that use bas advanced phone features.	sic and

CO5:	Deploy applications to the Android marketplace for distribution.

NIL / Course Code – Course Title / Topics

Course Ob	Course Objective			
1	Students should become familiar with the German language; the 4 language skills are: listening, speaking, reading and writing.			
2	To empower the students to use German in daily communication.			
3	To build up their confidence in the usage of German.			
4	Familiarize the students with social, economic and cultural life in Germany.			

THEORY		
UNIT		PERIODS
1	Hello And Basics	10

Language acts: greet and say goodbye/introduce oneself and others/talk about oneself and others/name numbers up to 20, telephone number and e-mail address/spell them/talk about countries and languages. Vocabulary: numbers from 1-20/countries and languages. Grammar: question/statement/verbs and personal pronouns. Pronunciation: alphabet. Regional studies: Countries and languages. Film: Good afternoon/The telephone number/I speak. Deepening: Advantages of learning German.

UNIT	TITLE	PERIODS	
2	Friends Colleagues And Me	11	

Language acts: talk about hobbies/date/name days of the week/talk about work, professions and working hours/name numbers from 20 onwards/talk about seasons/create a profile on the internet. Vocabulary: hobbies/weekdays/numbers from 20/occupations/months and seasons. Grammar: articles/verbs and personal pronouns II/yes/no questions/plural of nouns/the verbs 'have' and 'be'. Pronunciation: sentence melody, questions and answers. Regional studies: Seasons and typical hobbies. Film: The trainee. Deepening: Principles of living together.

UNIT	TITLE	PERIODS
3	In The City	11

Language acts: Naming places and buildings/asking questions about places/assigning texts to a picture story/asking about things/naming means of transport/asking for directions and describing a route/understanding texts with international words/learning articles. Vocabulary: places and buildings/means of transport/directions. Grammar: definite, indefinite and negative article/imperative with 'Sie/you'. Pronunciation: long and short vowels. Regional studies: Sights, numbers, events in Hamburg. Film: Taxi ride/in the Hotel. Motivation: vision, goal setting.

UNIT	TITLE	PERIODS
------	-------	---------

4	Enjoy Your Meal	11
---	-----------------	----

Language acts: talking about food/planning a purchase/conversing while shopping/conversing while eating/understanding texts with W-questions/ordering and learning words. Vocabulary: meals/food/drinks/shops. Grammar: positions in a sentence/accusative/verb with accusative case. Pronunciation: Umlauts ä, ö, ü. Regional studies: Food in D-A-CH, professions related to food. Film: Breakfast/shopping. Motivation: plan progress

UNIT	TITLE	PERIODS
5	Day By Day & Time With Friends	11

Language acts: understanding and telling the time/talking about the family/arranging an appointment/excusing oneself for being late/arranging an appointment by phone. Vocabulary: daily routine/time/family. Grammar: telling time with 'am, um, von...bis'/possessive article/modal verbs. Pronunciation: Hearing and speaking 'r'. Regional studies: Punctuality in D-A-CH. Film: You never have time! Motivation: Progress diary.

Language acts: planning something together/talking about birthdays/understanding and writing an invitation/ordering and playing at a restaurant/talking about an event/finding specific information in texts/understanding event tips on the radio. Vocabulary: leisure activities/food/drinks/properties/events. Grammar: dates 'on..'/separable verbs/prepositions for + accusative/personal pronouns in accusative. Pronunciation: ei, eu, au. Regional studies: Pubs & Co. in D-A-CH. Film: Work? In the restaurant. Surprise! Deepening: Diversity of living together. Summarize course experiences. Write a short report.

	TOTAL PERIODS:	54
COURSI	E OUTCOMES:	
Upon co	mpletion of this course, students will be able to:	
CO1:	Communicate in a simple way in German	
CO2:	Understand and use part of the basis of German grammar	
CO3:	Understand the social and cultural life in Germany in a rudimentary way, reflect on it comparatively also with others and exchange mails about it	
CO4:	CO4: Orientate themselves in the country and in the public sphere	
CO5:	Focus on own motivation and set goals	
TEXT B	OOKS:	
1	Klett Verlag,"Netzwerk, Deutsch als Fremdsprache A1.1, A1.2, Kursbuch plus Audio CD, workbook", Intensive trainer,2016

### **COURSE OBJECTIVES:**

1	Students should become familiar with the French language; the 4 language skills are:  1 listening, speaking, reading and writing.	
2	To empower the students to use French in daily communication.	
3	3 To build up their confidence in the usage of French.  UNIT TITLE PERIODS  1 'Hello' and basics 10	
UNIT		
1		

Language acts: greet and say goodbye/introduce oneself and others/talk about oneself and others/name numbers up to 20, spelling email or telephone numbers /talk about French speaking countries Vocabulary: numbers from 1-20/countries and languages. Grammar: personal pronouns/ verb to have and to be/ statement/ yes-no questions Pronunciation: Alphabet. Typical French sounds Regional studies: French Speaking countries. Audio-Video: meeting people, very simple dialogue Deepening: Advantages of learning French.

UNIT	TITLE	PERIODS
2	'Family, Friends, and me'	11

Language acts: talk about season/date/time/name days of the week/talk about family and friends, work, professions and working hours/name numbers from 20 onwards/talk about seasons/create a profile on the internet. Vocabulary: Season/year/month/week/time/family and friends vocabulary, numbers from 20/ occupations/months and seasons. Grammar: definite and indefinite articles/adjectives and gender/ singular-plural of nouns/conjugation at present 1st verb group. Pronunciation: linking words in French, intonation, practice of difficult French sounds Regional studies: Seasons and most liked sport and hobbies. Audio-Video: positioning oneself with respect to others. Simple dialogue. Deepening: Family in France

UNIT	TITLE	PERIODS
3	'In the city'	11

Language acts: Naming places, roads, and buildings/asking questions about places/assigning texts to a picture story/asking about things/naming means of transport/asking for directions and describing a route/understanding texts with international words/learning articles. Vocabulary: places and buildings/means of transport/directions right/left. Grammar: possessive-demonstrative pronouns, making a comparison, Imperative, few very useful irregular verbs Pronunciation: Deepening of "in, un, on, an, .." French sounds. Regional studies: French geography. Audio-Video: Finding your way/ Taxi ride/in the Hotel.

UNIT	TITLE	PERIODS
4	'Enjoy your meal'	11

Language acts: talking about food/planning a purchase/conversing while shopping/conversing while eating/understanding texts with W-questions/ordering and leaning words. Vocabulary: meals/food/drinks/shops. Grammar: past (passé compose and imparfait) and future conjugation of the 1st verb group, different type of propositions Pronunciation: hint on the French pronunciation in the street. Shortening words Regional studies: cuisine in France, professions related to food. Audio-Video: at restaurant, at the grocery store, recipe

UNIT	TITLE	PERIODS
5	'Day by day' & 'Time with friends'	11

Language acts: talking about friends/arranging an appointment/excusing oneself for being late/deciding with friends what to do, organizing a trip, talking about money Vocabulary: daily routine /time /friends /leisure. Grammar: modal verbs and subjunctive conjugation and finding conjugation using the Bescherelle book Pronunciation: how French spoken quick. Be able to recognize and understand in real situation Regional studies: French culture and art Audio-Video: going in vacation, to the museum, at a concert

1

Fundamentals of mathematics

To learn the principles of Trees

Symbolic Logic

# COURSE OBJECTIVES: 1 To learn symbolic logic 2 To learn set theory 3 To learn the principles of graph theory

UNIT	TITLE	PERIODS

Proposition, Logical operators, conjunction, disjunction, negation, conditional and bi-conditional operators, converse, Inverse, ContraPositive, logically equivalent, tautology and contradiction. Normal forms – Disjunctive normal forms and Conjunctive normal forms.

UNIT	TITLE	PERIODS
2	Set Theory	11

Set operations, Venn diagram, Properties of sets, number of elements in a set, Power set- Cartesian product, relations & functions,

UNIT	TITLE	PERIODS
3	Relations and functions	11

Equivalence relation, partially and Ordered sets, Functions: Types of Functions, Composition of Functions. Boolean Algebra and its Properties – Karnaugh Map (1, 2, 3, and 4 variables only)

UNIT	TITLE	PERIODS
4	Graph Theory	11

Graph – Definition – Applications of Graph – Finite and Infinite Graphs – Incidence and Degree – Isolated Vertex – Pendant Vertex – Null Graph -Isomorphism –Sub graphs – Walks, paths and circuits – Connected Graphs – Disconnected Graphs and components. Euler Graphs –operations on Graphs - Hamiltonian and circuit

UNIT	TITLE	PERIODS
5	Tree	11

Trees and Fundamentals Circuits: Trees - Some properties of Trees - Pendant Vertices in a tree - Distance and Centers in a Tree - Rooted and Binary Trees - On Counting Trees - Spanning Trees - Fundamental Circuits.

10

	TOTAL PERIODS:	54
COURSE	OUTCOMES:	
Upon com	pletion of this course, students will be able to:	
CO1:	Know the principles of graph theory	
CO2:	Know principles of Trees	
CO3:	Know the principles of set theory	
REFEREN	CE BOOKS/ COURSES:

NIL

## COURSE OBJECTIVES:

OOOINOL O	500011420.	
1	To understand basic database system	
2	To learn Data models and normalization	
3	To learn SQL queries to handle the database	
4	To learn database transaction management and database recovery	
UNIT	TITLE	PERIODS
1	Basic Concept	8

Database, Database system, Database management system, Data independence, advantages and disadvantages, 3-level architecture and mapping DBMS vs.File System, DBA's Role, RDBMS.

UNIT	TITLE	PERIODS
2	Data Models and Normalization	8

Relational model, Hierarchical model, Network model, comparison of these model, An overview of the E/R Model, E/R diagrams, Database design with the E/R model.

Introduction to Normalization, Need of Normalization, various forms of Normalization (1NF, 2NF, 3NF, BCNF)

UNIT	TITLE	PERIODS
3	SQL	8

Introduction, Data Definition Language (DDL), Data Manipulation Language (DML), Data Control Language (DCL) statements, Views, Sub–queries, Access Rights.

UNIT	TITLE	PERIODS
4	SQL and transaction management	12

Introduction, Data Definition Language (DDL), Data Manipulation Language (DML), Data Control Language (DCL) statements, Views, Sub–queries, Access Rights.

Introduction to Transaction Processing, Properties of Transactions, Concurrency Control, the purpose of concurrency control, Techniques for concurrency control.

UNIT	TITLE	PERIODS
LABORAT	ORY	72

Study of Database Concepts: Relational model – table – operations on tables – index – table space – clusters – synonym – view – schema – data dictionary – privilege – role transactions.

- 2. Study of SQL: Primitive Data Types User Defined data Types Built-in Functions Parts of Speech of create, alter, drop, select, insert, delete, update, commit, rollback, save point, grant, revoke.
- 3. Study of Query Types: Queries involving Union, Intersection, Difference, Cartesian product, Divide Operations Subqueries Join Queries Nested Queries Correlated, Queries Recursive Queries.
- 4. Study of Procedural Query Language: Blocks, Exception Handling, Functions, Procedures, Cursors, Triggers, Packages.
- 5. Application: Design and develop any two of the following:
- (a)Library Information System
- (b)Logistics Management System
- (c) Students' Information System
- (d)Ticket Reservation System
- (e)Hotel Management System
- (f)Hospital Management System
- (g)Inventory Control
- (h) Retail Shop Management
- (i)Employee Information System
- (j) Payroll System

	TOTAL PERIODS:	108
COURSE O	UTCOMES:	
Upon compl	letion of this course, students will be able to:	
CO1:	Basic concepts of Database Systems and Application	
CO2:	Identify the SQL queries for a given scenario.	
CO3:	Develop solutions using database concepts for real time requirements	
CO4:	Analyze and Select storage and recovery techniques of the database system the different Internet devices and their functions	m Recognize

Fundamentals of machine learning

### COURSE OBJECTIVES:

1	To work on machine learning in a scientific working environment
2	To implement, train and apply supervised machine learning algorithms - linear regression, and logistic regression.
3	To implement, train and apply unsupervised machine learning algorithm - K-Means

TITLE	PERIODS
LABORATORY	108

- 1. Installing Jupyter Notebook and libraries numpy, scikit-learn
- 2. Loading and using Jupyter notebook by creating variables and printing them
- 2. Loading datasets and separating loaded datasets into training and testing
- 3. In Jupyter notebook review, modify, run and observe:
- a. Simple linear regression model with two parameters loading training and test data with NumPy and plotting it.
- b. Review a simple cost function and minimize the cost to provide optimal two parameters
- c. Reviewing gradient function and automating optimizing of parameters using gradient descent
- d. Using Numpy to create, index, slice, vector dot product, speed of vector vs loop.
- 4. Create a linear regression model to predict the financial sustainability of an organic store
- 5. Train a linear regression model using scikit-learn
- 6. Review, modify, run and observe:
- a. Issues with using linear regression to classify data
- b. Exploring sigmoid function in logistic regression
- c. Plotting decision boundary example
- d. Cost function for logistic regression
- 7. Create a logistic regression model to predict if it will rain tomorrow based on the last 10 year's rainfall data.
- 8. Train a logistic regression model using scikit-learn.
- 9. Implement the k-means clustering algorithm and use it for image compression.

	TOTAL PERIODS:	108
COURSE	OUTCOMES:	
Upon con	npletion of this course, students will be able to:	
CO1:	Design the python programs for various learning algorithm	
CO2:	Understand the implementation procedures for the machine learning algori	thms
CO3:	Understand a range of machine learning algorithms along with their strengt weaknesses	ths and

Fundamentals of computer and internet

# COURSE OBJECTIVES:

1	The course introduces the main concepts of networking.	
2	To introduce the types of layers in computer networks.	
3	To educate the functions of various OSI layers	
UNIT	TITLE	PERIODS
1	Introduction to Computer network	14

Uses of Computer Networks: Business Applications, Home Applications, Mobile Users, Social Issues, Network Hardware: LANs, MANs, WANs.

Network Software: Protocol Hierarchies, Design Issues for the Layers, Connection-Oriented and Connectionless Services, Service Primitives, The Relationship of Services to Protocols. Reference Models: The OSI Reference Model, The TCP/IP Reference Model. Example Networks: The Internet, Connection-Oriented Networks (X.25, Frame Relay & ATM), Ethernet.

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service, Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets.

UNIT	TITLE	PERIODS
2	Network Layer	14

Congestion Control Algorithms: General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.

Quality of Service: Requirements, Techniques for Achieving Good Quality of Service, Integrated Services, Differentiated Services.

Internetworking: Networks Differences, Connecting Networks, Concatenated Virtual Circuits, Connectionless Internetworking, Tunneling, Internetwork Routing, Fragmentation.

Network Layer in the Internet: The IP Protocol, IP Addresses, Internet Control Protocols, OSPF-The Interior Gateway Routing Protocol, BGP-The Exterior Gateway Routing Protocol, Internet Multicasting, Mobile IP, IPv6.

UNIT	TITLE	PERIODS
3	TCP and UDP	16

Transport Layer: The Transport Service: Services Provided to the Upper Layers, Transport Service Primitives, Berkeley Sockets. Elements of Transport Protocols: Addressing, Connection Establishment, Connection Release, Flow Control and Buffering, Multiplexing, Crash Recovery, Simple Transport Protocol.

User Datagram Protocol (UDP): Introduction to UDP, Remote Procedure Call, The Real-Time Transport Protocol.

Internet Transport Protocols (TCP): Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, Modeling TCP Connection Management, TCP Transmission Policy, TCP Congestion Control, TCP Timer Management, Wireless TCP & UDP Transactional TCP.

UNIT	TITLE	PERIODS
4	Application Layer	14

Application Layer: The Domain Name System(DNS): The DNS Name Space, Resource Records, Name Servers. Electronic Mail: Architecture & Services, The User-Agent, Message Formats, Message Transfer, Final Delivery.

UNIT	TITLE	PERIODS
5	World Wide Web	14

Architectural Overview, Static Web Documents, Dynamic Web Documents, HTTP – HyperText Transfer Protocol, Performance Enhancements. Multimedia: Introduction to Digital Audio, Audio Compression, Streaming Audio, Internet Radio, Voice over IP, Introduction to Video, Video Compression, Video on Demand, The MBone – The Multicast Backbone.

<u>'</u>		
	TOTAL PERIODS:	72
COURSE	OUTCOMES:	
Upon com	npletion of this course, students will be able to:	
CO1:	Knowledge of OSI Layers in Computer Network.	
CO2:	Ability to identify transmission media, types, and topologies of the network.	
CO4:	Familiarization with the techniques of error detection and congestion control

Machine Learning

# COURSE OBJECTIVES:

1	To implement large margin classifiers(SVM).
2	To implement anomaly detection and recommender systems.
3	To implement a large data algorithm.
4	To apply algorithms to a real-life problem.

TITLE	PERIODS
LABORATORY	144

- 1. Downloading iris datasets
- 2. Implement SVM and use it for classification using iris datasets.
- 3. Gathering data for computer networks to detect anomalies.
- 4. Implement the anomaly detection algorithm and apply it to monitor computer servers failing.
- 5. Gathering data for collaborative filtering recommender systems
- 6. Implement a content-based collaborative filtering recommender system for movies.
- 7. Implement stochastic gradient descent and check for convergence.
- 8. Implement OCR (Optical Character Recognition) with two ML algorithms.

	TOTAL PERIODS:	144					
COURSE	COURSE OUTCOMES:						
Upon comp	pletion of this course, students will be able to:						
CO1: Understand large margin classifiers(SVM).							
CO2: Understand anomaly detection and recommender systems.  CO3: Understand a large data algorithm.							
CO4:	Apply algorithms to a real-life problem.

#### COURSE OBJECTIVES

COURSE OF	BJECTIVES:	
1	To prepare the students, think critically.	
2	To prepare the get ready for aptitude exams	
3	To Improve communication skills.	
4	Develop a synthesizing mind.	
UNIT	TITLE	PERIODS
1	Group discussions	10

Advantages of group discussion, structured GD – roles, negative roles to be avoided, personality traits to do well in a GD, initiation techniques, how to perform in a group discussion, summarization techniques.

UNIT	TITLE	PERIODS
2	Reading comprehension advanced	8

A course on how to approach middle-level reading comprehension passages.

UNIT	TITLE	PERIODS
3	Problem solving	11

Money-related problems; Mixtures; Symbol-based problems; Clocks and calendars; Simple, linear, quadratic, and polynomial equations; special equations; Inequalities; Functions and graphs; Sequence and series; Set theory; Permutations and combinations; Probability; Statistics, Time speed and distance, work time problems.

UNIT	TITLE	PERIODS
4	Professional grooming and practices	11

Basics of corporate culture, key pillars of business etiquette. Basics of etiquette: Etiquette – socially acceptable ways of behavior, personal hygiene, professional attire, cultural adaptability. Introductions and greetings: Rules of the handshake, earning respect, business manners. Telephone etiquette: activities during the conversation, concluding the call, to take a message. Body Language: Components, undesirable body language, desirable body language. Adapting to corporate life: Dealing with people.

UNIT	TITLE	PERIODS
	Non-verbal reasoning, simple engineering aptitude, and Spatial	
5	aptitude	14

Mirror image, Water image, Paper folding, Paper cutting, Grouping of figures, Figure formation and analysis, Completion of incomplete pattern, Figure matrix, Miscellaneous, Cloth, leather, 2D and 3D objects, coin, match sticks, stubs, chalk, chess board, land and geodesic problems, etc., related problems.

	TOTAL PERIODS: 54	4
COURSE	OUTCOMES:	
Upon con	npletion of this course, students will be able to:	
CO1:	Communicate convincingly and negotiate diplomatically while working in a team to arrive at a win-win situation. They would further develop their interpersonal and leadership skills.	)
CO2:	Examine the context of a Group Discussion topic and develop new perspectives a ideas through brainstorming and arriving at a consensus.	ınd
CO3:	Identity, recall and arrive at appropriate strategies to solve questions on geometry will be able to investigate, interpret and select suitable methods to solve questions arithmetic, probability, and combinatorics.	-
CO4:	Relate, choose, conclude and determine the usage of the right vocabulary

Fundamentals of computer and Internet

# COURSE OBJECTIVES:

1	To provide an overview of an exciting field of Cloud Computing			
2	To introduce tools requires building, deploying, running and managing applications on a cloud platform.			
3	To develop the cloud application development skills, such as Node.js, REST architecture, JSON, Cloud Foundry, and DevOps services			
4	To enable students to have skills that will help them to solve complex real-world problems in decision support.			
UNIT	TITLE	PERIODS		
1	Introduction to Cloud Computing	18		
	•			

Definition with Real Time Examples, Introduction to cloud computing and its characteristics, Benefits of cloud, Models of Cloud, IBM Cloud resources, REST architecture, Cloud Foundry concepts

UNIT	TITLE	PERIODS
2	Cloud Enabling Technologies	18

Service Oriented Architecture – REST and Systems of Systems – Web Services – Publish-Subscribe Model – Basics of Virtualization – Types of Virtualization – Implementation Levels of Virtualization – Virtualization Structures – Tools and Mechanisms – Virtualization of CPU – Memory – I/O Devices – Virtualization Support and Disaster Recovery.

TITLE	PERIODS
LABORATORY	72

- 1. Configuring IBM Cloud account and creating an application using Cloud Foundry Service on IBM Cloud.
- 2. Mention all commands used in IBM CLI to push an application from the local system to the IBM cloud environment.
- 3. Configuring secure web application with single sign-on (APP ID) on IBM cloud.
- 4. Configuring Cloud and managing the datasets on IBM Cloud.
- 5. Configuring Visual Recognition Service with IBM Watson.
- 6. Configuring IAM (identity access management) service on IBM cloud.
- 7. Configuring a server to fetch files from a local file system using Nodejs.
- 8. Implementation of containerization using Docker.
- 9. Implementation of container orchestration using Kubernetes.
- 10. Creating a Nodejs application using Express Framework.

	TOTAL PERIODS:	108
COURSE OUTCOMES:		
Upon completion of this course, students will be able to:		

CO1:	Understand the vision of Cloud Computing from a global context.
CO2:	To understand various compute options on IBM Cloud from the market perspective of Cloud Computing.
CO3:	Identity, recall and arrive at appropriate strategies to solve questions on geometry. They will be able to investigate, interpret and select suitable methods to solve questions on arithmetic, probability, and combinatorics.
CO4:	Relate, choose, conclude and determine the usage of the right vocabulary

	Innovative and Design Thinking	1	0	4	3
PREREQUI	SITES:				
NIL / Course	Code – Course Title / Topics				
COURSE O	BJECTIVES:				
1	To Learn how to develop an innovative design model.				
2	To Identify, understand and discuss current, real-world issues.				
3	To learn the best design solution among the potential solutions with its functional position probability, and combinatorics.				
4	To learn how to utilize the technical resources and to work in actual working environments.				
5	To understand how to write technical documents and give of the work completed.	oral p	reser	itation	ns related to

Students are advised to create or innovate a software development with the following objective: Instead of creating new software and then "selling" it to the public, innovative design is a process of identifying, pinpointing, and understanding the needs of the user or audience. What we need are new choices - new products that balance the needs of individuals and society as a whole; new ideas and new strategies that tackle the global challenges of health, poverty, and education. Each student has to identify the need for a product, synthesize, analyze, design, modify and select the best design. Project Identification - Specification Development, specification, SRS, design, development and testing. Conduct Functional Decomposition, Brainstorming of possible solutions, The student will make an oral presentation followed by a brief question and answer session. The innovative design (presentation and report) will be evaluated by an internal assessment committee. The presentation will take place during the weekly class session. Students have to make oral presentations periodically and finally submit a technical project report.

	TOTAL PERIODS:	90			
COURSE C	COURSE OUTCOMES:

Fundamentals of database system

### COURSE OBJECTIVES:

1 To Understand the concepts of Intelligent database			
2 To Understand the concepts of knowledge-based systems and apply with Al			
3	To Design and create the small applications,		

UNIT	TITLE	PERIODS
1	Introduction To IDBS	10

The informal definition of the domain - General characteristics of IDBSs - Data models and the relational data model - A taxonomy of intelligent database systems - Guidelines for using intelligent database systems.

UNIT	TITLE	PERIODS
2	Semantic Data Models	11

Nested and semantic data models – Introduction - The nested relational model - Semantic models - Hyper semantic data models - Object-oriented approaches to semantic data modeling - Object-oriented database systems - Basic concepts of a core object-oriented data model - Comparison with other data models Query languages and query processing - Operational aspects – Systems - The ODMG standard. The object-relational data model - Java and databases – Conclusions - Active database systems. Basic concepts – Issues – Architectures - Research relational prototypes—the Starburst Rule System - Commercial relational approaches.

UNIT	TITLE	PERIODS	
3	Knowledge-Based Systems- Al Context	11	

Characteristics and classification of the knowledge-based systems – Introduction - The resolution principle Inference by inheritance – Conclusion - Deductive database systems - Basic concepts - DATALOG language - Deductive database systems and logic programming systems—differences - Architectural approaches - Research prototypes - Updates in deductive databases - Integration of deductive database and object database technologies - Constraint databases - Conclusions.

UNIT	TITLE	PERIODS
4	Advanced Knowledge-Based Systems	11

Introduction - Architectural solutions - The 'general bridge' solution - Extending a KBS with components proper to a DBMS - The 'tight coupling' approach – Conclusion - Advanced Solutions: Introduction A 'knowledge level' approach to the interaction with an IAS- TELOS - a language for implementing very large 'integral approach' systems-The CYC project -Other projects based on 'conceptual representation' approach - Lexical approaches to the construction of large KBs.

UNIT	TITLE	PERIODS
5	Application In IDBS	11

Introduction - Temporal databases - Basic concepts - Temporal data models - Temporal query languages —Ontologies -Ontology theoretical foundations - Environments for building ontologies - Structured, semi-structured and unstructured data - Multimedia database - Semi-structured data - Mediators — Motivation Architecture - Application of mediators to heterogeneous systems — Proposals - Multi-Agents systems Main issues in designing a multi-agent system - Open problems. Internet indexing and retrieval - Basic indexing methods - Search engines or meta-searchers - Internet spiders - Data mining -Data mining taskData mining tools - Medical and legal information systems - Medical information systems - Conclusions.

	TOTAL PERIODS:	54			
COURSE OUTCOMES:					
Upon compl	etion of this course, students will be able to:				
CO1:	Understand the concepts of Intelligent database.

Computer network

### **COURSE OBJECTIVES:**

1	To Understand a social network analysis
2	To Understand the Web data and semantics in social network applications
3	Model and aggregate the social network data

ı	UNIT	TITI F	PERIODS
ı	01111	11122	i Likiobo
	1	Social Network Analysis.	10

Network analysis- Development of Social network analysis- Key concepts and measures in network analysis -The global structure of networks - The macro-structure of social networks - Personal networks.

UNIT	TITLE	PERIODS
2	Web Semantics In Social Network Applications	11

Electronic sources for network analysis - Electronic discussion networks - Blogs and online communities Web-based networks - Knowledge Representation on the Semantic Web - Ontologies and their role in the Semantic Web Ontology languages for the Semantic Web - The Resource Description Framework (RDF) and RDF Schema - The Web Ontology Language (OWL) - Comparison to the Unified Modelling Language (UML) - Comparison to the Entity/Relationship (E/R) model and the relational model - Comparison to the Extensible Markup Language (XML) and XML Schema.

UNIT	TITLE	PERIODS
3	Modelling And Aggregating Social Network Data	11

State-of-the-art in network data representation - Ontological representation of social individuals - Ontological representation of social relationships - Aggregating and reasoning with social network data Representing identity - On the notion of equality - Determining equality - Reasoning with instance equality - Evaluating smushing

UNIT	TITLE	PERIODS
4	Developing Social-Semantic Applications	11

Building Semantic Web applications with social network features - The generic architecture of Semantic Web applications -Sesame – Elmo – GraphUtil - The features of Flink - System design – open academia: distributed, semantic-based publication management - The features of open academia - System design.

UI	NIT	TITLE	PERIODS
	5	Evaluation Of Social Network Analysis	11

Evaluation of web-based social network extraction - Data collection - Preparing the data - Optimizing the goodness of fit - Comparison across methods and networks - Predicting the goodness of fit Evaluation through analysis - Semantic-based Social Network Analysis in the sciences - Data acquisition - Representation, storage and reasoning- Visualization and Analysis – Results - Descriptive analysis - Structural and cognitive effects on scientific performance.

	TOTAL PERIODS:	54		
COURSE	COURSE OUTCOMES:			
Upon cor	npletion of this course, students will be able to:			
CO1:	Understand a social network analysis			
CO2:	Understand the Web data and semantics in social network applications			
CO3:	Model and aggregate the social network data			
CO4:	Develop social-semantic applications			
REFERE	NCE BOOKS/ COURSES:			
1	Peter Mika , Social Networks and the Semantics Web", Springer Publication	s, 2007		
2	Borko Furht, "Handbook of Social Network Technologies and Applications", Springer Publications,1st Edition,2010.

	Software Testing	3	0	0	3
		•			•
PREREQ	UISITES:				
Basic pro	gramming				
COURSE	OBJECTIVES:				
1	1 Understand how to detect, classify, prevent and remove defects				
2	Understand the effective strategies of testing, the methods, and technologies of software testing				
3	Understand the concepts of milestone for controlling	Understand the concepts of milestone for controlling and monitoring			

UNIT	TITLE	PERIODS
1	Software Testing	10

The Role process in Software Quality- Testing as a process- Overview of testing maturity model, software testing definition- Software Testing Principles –Origin of defects, Defect classes, the defect Repository and Test Design

UNIT	TITLE	PERIODS
2	Testing Strategies	11

Testing design strategies, Test case design strategies, Black box testing, Random Testing, Equivalence partitioning, Boundary value analysis, Cause-and- Effect, State transition, Error Guessing, COTS, White box testing techniques - Statement coverage - Branch Coverage - Condition coverage - Decision/Condition coverage - Multiple condition coverage - Dataflow coverage - Mutation testing

UNIT	TITLE	PERIODS
3	The Need For Levels Of Testing	11

Unit test, Planning, Designing the unit tests, Integration test, Integration Strategies for Procedure and Functions, Integration strategies for Classes, Integration test planning, System Test: Functional Testing, Performance Testing, Stress Testing, Configuration Testing, Security Testing, Recovery Testing, Regression testing, Alpha, Beta and Acceptance Tests.

UNIT	TITLE	PERIODS
4	Test Object Oriented Software	11

Unit Testing in OO Context, Integration Testing in OO Context, OO testing methods, Class level testing, the interclass test case design, testing for real-time system

UNIT	TITLE	PERIODS
5	Controlling And Monitoring	11

Status, Productivity, Cost, Error, fault and Failures, Effectiveness, Criteria for Test Completion, Reviews as testing Activity: Inspection Walkthrough, Components of review plan, testing for web application,

Component level testing, and Clean room tests.			
	TOTAL PERIODS:	54	
COURSE	OUTCOMES:		
Upon comp	pletion of this course, students will be able to:		
CO1:	Understand how to conduct formal inspections, record and evaluate results of inspections		
CO2:	To implement different testing strategies		
CO3:	Describe controlling and monitoring		
REFEREN	CE BOOKS/ COURSES:

		•				
PREREQUI	SITES:					
Basic Progra	amming					
COURSE O	BJECTIVES:					
1	To introduce the basics of computers and information to	echnolog	·/			

1	To introduce the basics of computers and information technology
2	To educate problem solving techniques
3	To educate problem solving techniques
4	To practice structured programming to solve real life problems
5	To understand File Operations concepts

UNIT	TITLE	PERIODS
1	Introduction	10

History of Computers – Block diagram of a Computer – Components of a Computer system – Classification of computers - Hardware – Software – Categories of Software – Operating System – Applications of Computers – Network Structure– Internet and its services – Intranet –Study of word processor – Preparation of worksheets - Algorithm –Pseudocode – FlowChart.

UNIT	TITLE	PERIODS
2	C Programming Basics	11

Problem formulation – Problem Solving – Introduction to 'C' programming –fundamentals – structure of a 'C' program – compilation and linking processes – Constants, Variables – Data Types –Expressions using operators in 'C' – Managing Input and Output operations –Decision Making and Branching – Looping statements – solving simple scientific and statistical problems.

UNIT	TITLE	PERIODS
3	Array, String, And Functions	11

Arrays – Initialization – Declaration – One-dimensional and Two-dimensional arrays. String-String operations – String Arrays. Simple programs- sorting- searching –matrix operations- Function – definition of function – Declaration of function – Pass by value – Pass by reference – Recursion.

UNIT	TITLE	PERIODS
4	Structure And Unions	11

Pointers – Definition – Initialization – Pointers arithmetic – Pointers and arrays- Example Problems. Structures – need for structure data type – structure definition – Structure declaration – Structure within a structure – Union – Programs using structures and Unions – Storage classes.

UNIT	TITLE	PERIODS
5	Files	11

preproces	s on a file – Random access to files – command line arguments Introduction to ssor – Macro substitution directives – File inclusion directives – conditional com – Miscellaneous directives			
	TOTAL PERIODS:	54		
COURSE	OUTCOMES:			
Upon com	npletion of this course, students will be able to:			
CO1:	Apply problem-solving techniques like algorithms, flowchart and pseudo co real-life problems; summarize 7 phases of the program development cycle, tokens of the C program, its structure, I/O functions			
CO2:	Familiar on usage of structures, pointers and its manipulation

# PREREQUISITES:

NIL

#### COURSE OBJECTIVES:

300K0E 3B3E3 HVE6.				
1	Addresses the problems of acquisition, storage, retrieval.			
2	Processing of images, videos, and high dimensional signals			
3	Extraction and analysis of useful information for human users, robots, and autonomous systems.			
UNIT	TITLE	PERIODS		
1	Introduction And Image Enhancement	10		

Digital image fundamentals, Concept of pixels and gray levels, Applications of image processing, Introduction to image enhancement, spatial domain methods: point processing - intensity transformations, histogram processing, image averaging, image subtraction, Spatial filtering-smoothing filters, sharpening filters, Frequency domain methods: low pass filtering, high pass, filtering, Homomorphic filtering.

UNIT	TITLE	PERIODS
2	Image Restoration	11

Introduction to Image restoration, Degradation model, Restoration in the presence of Noise only-Spatial Filtering, Periodic Noise reduction by Frequency Domain Filtering, Algebraic approaches- Inverse filtering, Wiener filtering, Constrained Least squares restoration.

UNIT	TITLE	PERIODS
3	Image Compression	11

Introduction, Need for image compression, Redundancy in images, Classification of redundancy in images-image compression scheme, Classification of image compression schemes, Huffman coding, Arithmetic coding, Predictive coding, Transformed based compression, Image compression standards, Wavelet-based image compression.

UNIT	TITLE	PERIODS
4	Image Segmentation	11

Introduction to image segmentation, Detection of discontinuities - point, line, and edge and combined detection; Edge linking and boundary description - local and global processing using Hough transform, Thresholding, Regionoriented segmentation - basic formulation, region growing by pixel aggregation, region splitting, and merging.

UNIT	TITLE	PERIODS
5	Digital Video & Coding	11

	Video, Time-varying Image formation Models, SpatioTemporal Sampling, Optical flow, nethodologies, Overview of coding systems, Video Compression Standards.			
	TOTAL PERIODS: 54			
COURSE	OUTCOMES:			
Upon com	pletion of this course, students will be able to:			
CO1:	Comprehend the image processing fundamentals and enhancement techniques in spatial and frequency domains.			
CO2:	Describe the color image fundamentals, models, and various restoration techniques.			
CO3:	Design and Analyze the image compression systems.			
CO4:	Outline the various image segmentation and morphology operations.			
CO5:	Comprehend the basics of video processing and video coding.

Course Code	Course Title	Periods per week		•	
		L	Т	Р	Credits
	Wireless Computing	3	0	0	3

## PREREQUISITES:

computer network

#### COURSE OBJECTIVES:

1	To understand the fundamentals of wireless sensor networks and its applic critical real time scenarios	cation to				
2	To study the various protocols at various layers and its differences with tra	ditional				
3	To understand the issues pertaining to sensor networks and the challenge managing a sensor network	s involved in				
4	To create a model in wireless computing					
UNIT	TITLE	PERIODS				
1	Introduction	10				

Wireless networking- Physical layer- OFDM and 802.11 (WiFi) PHY - Multi- antenna systems and MIMO- Overview of 802.11n/ac PHY including beamforming- MAC layer -

CSMA/CA and WiFi MAC overview - Wide bandwidth channel access techniques (802.11n/ac)-Energy efficiency and rate control.

UNIT	TITLE	PERIODS
2	Mobile and wearable sensing	11

Overview of smartphone/wearable sensors -Accelerometer, gyroscope, magnetometer, etc. - Smartphone orientation and heading detection. Activity recognition and healthcare - Identifying human activities and context through sensors - Health monitoring and fitness tracking Wearables overview- Wrist-worn wearables.

UNIT	TITLE	PERIODS
3	Multi-gigabit wireless networks	11

Millimeter wave networking - Directionality and beam forming - Mobility and signal blockage - IEEE 802.11ad (60 GHz WLAN) MAC and PHY overview-Visible light communication - High-speed networking using LED - IEEE 802.15.7 PHY and MAC overview-Sensing through visible light- Visible light indoor localization and positioning.

UNIT	TITLE	PERIODS
4	Routing Protocols	11

The Case for Optimization in Fog Computing-Formal Modeling-Framework for Fog Computing Metrics -Optimization Opportunities along the Fog Architecture - Optimization Opportunities along the Service Life Cycle - Toward a Taxonomy of Optimization ,Problems in Fog Computing -optimization Techniques.

UNIT	TITLE	PERIODS
------	-------	---------

5	QoS and Energy Management	11	
Smart Surveillance Video Stream Processing at the Edge for Real-Time -Smart Transportation Applications-Intelligent Traffic Lights Management (ITLM) System -Fog Orchestration Challenges and Future Directions.			
	TOTAL PERIODS:	54	
COURSE O	JTCOMES:		
Upon comple	etion of this course, students will be able to:		
CO1:	CO1: How to build a WSN network		
CO2:	Analysis of various critical parameters in deploying a WSN		
CO3:	CO3: Classify different types of mobile telecommunication systems		
CO4:	Demonstrate the Adhoc networks concepts and its routing protocols		
CO5:	Make use of mobile operating systems in developing mobile applications		
REFERENC	REFERENCE COURSES/BOOKS:		
1	Theodore S. Rappaport, "Wireless Communications: Principles and Practice", Prentice Hall Publications, 2010.		
2	2 Matthew Gast, "802.11n: A Survival Guide", O'Reilly Media Publications, 2012.

		L	Т	Р	Credits
	Software Project Management	3	0	0	3

### PREREQUISITES:

Programming, English

#### COURSE OBJECTIVES:

1	1 Software Process		
UNIT	TITLE PERIOD		
4	To study about project management, planning and software development process		
3	Further, they will also come to know how to successfully plan and implement a software project management activity, and to complete a specific project in time with the available budget		
2	They will also get familiar with the different activities involved in Software F Management	Project	
1	Introducing the primary important concepts of project management related software development projects	to managing	
	·		

Process Maturity – Capability Maturity Model (CMM) – KPA Project Management, Variations in CMM - Productivity improvement process

UNIT	TITLE	PERIODS
2	People Management	11

Organization structure – Difficulties in people management - Effective team building – Role of Project manager - Team structures – Comparison of different team structures Software Metrics: Role of Metrics In Software Development - Project Metrics – Process Metrics – Data Gathering - Analysis Of Data For Measuring Correctness, Integrity, Reliability And Maintainability Of Software Products.

UNIT	TITLE	PERIODS
3	Project Management and Planning	11

Project initiation – standard process, Process Tailoring - Feasibility study - Planning – Estimation - Resource allocation - the Project Plan – Software Development Process – Defects – Finding Defects – Code Review Checklist – Projecting Defects Inspection And Review: Need- Process of Inspection-SRS- Design Document Inspection

UNIT	TITLE	PERIODS
4	Project Scheduling and Tracking	11

Scheduling - Critical path – Tracking - Timeline chart – Earned value chart. Software Configuration Management: Baselines - Software configuration items -The SCM process - Version control - Change control - Configuration audit - SCM standards

UNIT	TITLE	PERIODS
5	Working Capital Policy	11

Importance of Working Capital Management – Risk- Risk analysis and management – Types of Risk involved - RMM plan- Return Tradeoff for Current Asset Investments – Financing Current Assets – The Costs and Risks of Alternative Debt Maturities. Quality Planning: Quality process - Quality control –Defect prevention process- Total Quality Management.

TOTAL PERIODS:		54	
COURSE O	OUTCOMES:		
Upon comp	letion of this course, students will be able to:		
CO1:	Identify the different project contexts and suggest an appropriate management	nent strategy	
CO2:	Practice the role of professional ethics in successful software development		
CO3:	Identify and describe the key phases of project management		
CO4:	Determine an appropriate project management approach through an evalu business context and scope of the project	ation of the	
CO5:	Describe project scheduling and project tracking
